

CSC337 – Advanced Web Technologies – SP26
Midterm Lab – CLO4
BSE 6 A&B

Maximum Marks: 25

Submission Deadline: April 22, 2026, 2355 hrs.

Perform the following tasks:

1. Form a group of **Maximum 2 members**, select a Project that you need to work on in as the semester project for the Advanced Web Technologies course.
2. Project should cover proper functionalities and justifiable work effort for both group members. Work should be properly divided between members.
3. You are required to implement the **complete REST API specification** for your selected project.

Your code must be available on an online repository such as GitHub, and the following requirements should be met while designing and implementing express.js application:

1. Application should be structured modularly.
2. Use `dotenv`, proper Status Codes, any required middleware functions.
3. Proper Restful API Endpoints should be implemented (per module).
4. Implement proper Authentication / Authorization Requirements.
5. Error/Exception Handling Structure should be robust.
6. Sanitize data, add any/all validations on schemas, proper queries, and referencing where required.

Notes:

- Please specify your project overview and group information in your document with the link to online repository. Submission should be made in the form of word/pdf document with request/response screenshots of your API testing through e.g. Postman or any similar tool.
- Only 1 student should upload the document on MS Teams.
- Viva schedule will be shared later.
- Any group with more than 2 members will get their 50% marks deducted.
